Brand new, thoroughly revised and expanded 2nd edition - over 80 pages of new material! The Meta Model was the first model that led to NLP, it is the skeleton that the rest of the NLP Model hangs around. It is an incredibly powerful tool for consultants, trainers, coaches and therapists to radically improve their ability to create change in their clients. However, there have been very few attempts to clarify the Meta Model or frame it in a more useful and comprehensible manner, and many NLP books and trainings regurgitate the same old stuff from outdated and outmoded source material. The Meta Model Demystified thoroughly updates the language patterns and explains how to use the Meta Model to create seemingly magical change simply and easily. This expanded and completely revised 2nd edition includes: The key concepts that lead to the development of the Meta Model. A totally reconfigured explanation of the classic language patterns. Examples of using the Meta Model in various contexts. Sample questions. Hints and tips to master the Meta Model. PLEASE NOTE: This book assumes a basic and general understanding of Neuro-linguistic Programming (NLP)" The secret to great writing lies in learning how to alternate between three mindsets: Dreamer, Realist and Critic. The author will tell you exactly how to get into each mindset and how to apply it. This book will teach you the NLP models for creativity, tenacity and meticulous attention to detail. Read this book and you'll know how to write persuasively, hypnotically and prolifically. From introductory NLP tasks to Transformer models, this new edition teaches you to utilize powerful TensorFlow APIs to implement end-to-end NLP solutions driven by performant ML (Machine Learning) models Key Features Learn to solve common NLP problems effectively with TensorFlow 2.x Implement end-to-end data pipelines guided by the underlying ML model architecture Use advanced LSTM techniques for complex data transformations, custom models and metrics Book Description Learning how to solve natural language processing (NLP) problems is an important skill to master due to the explosive growth of data combined with the demand for machine learning solutions in production. Natural Language Processing with TensorFlow, Second Edition, will teach you how to solve common real-world NLP problems with a variety of deep learning model architectures. The book starts by getting readers familiar with NLP and the basics of TensorFlow. Then, it gradually teaches you different facets of TensorFlow 2.x. A survey of computational methods for understanding, generating, and manipulating human language, which offers a synthesis of classical representations and algorithms with contemporary machine learning techniques. This textbook provides a technical perspective on natural language processing—methods for building computer software that understands, generates, and manipulates human language. It emphasizes contemporary data-driven approaches, focusing on techniques from supervised and unsupervised machine learning. The first section establishes a foundation in machine learning by building a set of tools that will be used throughout the book and applying them to word-based textual analysis. The second section introduces structured representations of language, including sequences, trees, and graphs. The third section explores different approaches to the representation and analysis of linguistic meaning, ranging from formal logic to neural word embeddings. The final section offers chapter-length treatments of three transformative applications of natural language processing: information extraction, machine translation, and text generation. End-of-chapter exercises include both paper-and-pencil analysis and software implementation. The text synthesizes and distills a broad and diverse research literature, linking contemporary machine learning techniques with the field's linguistic and computational foundations. It is suitable for use in advanced undergraduate and graduate-level courses and as a reference for software engineers and data scientists. Readers should have a background in computer programming and college-level mathematics. After mastering the material presented, students will have the technical skill to build and analyze novel natural language processing systems and to understand the latest research in the field.
