Bilingualism and Bilingual Deaf Education Jan 18 2022 In Bilingualism and Bilingual Deaf Education, volume editors Marc Marschark, Gladys Tang, and Harry Knoors bring together diverse issues and evidence in two related domains: bilingualism among deaf learners - in sign

language and the written/spoken vernacular - and bilingual deaf education. The volume examines each issue with regard to language acquisition, language functioning, social-emotional functioning, and academic outcomes. It considers bilingualism and bilingual deaf education within the contexts of mainstream education of deaf and hard-of-hearing students in regular schools, placement in special schools and programs for the deaf, and co-enrollment programs, which are designed to give deaf students the best of both educational worlds. The volume offers both literature reviews and new findings across disciplines from neuropsychology to child development and from linguistics to cognitive psychology. With a focus on evidence-based practice, contributors consider recent investigations into bilingualism and bilingual programming in different educational contexts and in different countries that may have different models of using spoken and signed languages as well as different cultural expectations. The 18 chapters establish shared understandings of what are meant by "bilingualism," "bilingual education," and "co-enrollment programming," examine their foundations and outcomes, and chart directions for future research in this multidisciplinary area. Chapters are divided into three sections: Linguistic, Cognitive, and Social Foundations; Education and Bilingual Education; and Co-Enrollment Settings. Chapters in each section pay particular attention to causal and outcome factors related to the acquisition and use of these two languages by deaf learners of different ages. The impact of bilingualism and bilingual deaf education in these domains is considered through quantitative and qualitative investigations, bringing into focus not only common educational, psychological, and linguistic variables, but also expectations and reactions of the stakeholders in bilingual programming: parents, teachers, schools, and the deaf and hearing students themselves.

Becoming Bilingual in School and Home in Tibetan Areas of China:

Stories of Struggle Aug 21 2019 This book contributes significantly to our understanding of bilingualism and bilingual education as a sociocultural and political process by offering analyses of the stories of five Tibetan individual journeys of becoming bilingual in the Tibetan areas of China at four different points in time from 1950 to the present. The data presented comprises the narrative of their bilingual encounters, including their experiences of using language in their families, in village, and in school. Opportunities to develop bilingualism were intimately linked with historical and political events in the wider layers of experiences, which reveal the complexity of bilingualism. Moreover, their experiences of developing bilingualism are the stories of struggle to become bilingual. They struggle because they want to keep two languages in their lives. It illustrates their relationship with society. They are Tibetans. L1 is not the official language of their country, but it is the tie with their ethnicity. It addresses bilingualism linked with the formation of identity. The unique feature of this book is that it offers a deep understanding of bilingualism and bilingual education by examining the stories of five individuals' learning experiences over a period of almost 60 years.

The Bilingual Brain Apr 28 2020 'Fascinating. . . This engaging book explores just how multiple languages are acquired and sorted out by the brain. . . Costa's work derives from a great fund of knowledge, considerable curiosity and solidly scientific spirit' Philip Hensher Spectator

The definitive study of bilingualism and the human brain from a leading neuropsychologist Over half of the world's population is bilingual and yet few of us understand how this extraordinary, complex ability really works. How do two languages co-exist in the same brain? What are the advantages and challenges of being bilingual? How do we learn - and forget - a language? In the first study of its kind, leading expert Albert Costa shares twenty years of experience to explore the science of language. Looking at studies and examples from Canada to France to South Korea, The Bilingual Brain investigates the significant impact of bilingualism on daily life from infancy to old age. It reveals, among other things, how babies differentiate between two languages just hours after birth, how accent affects the way in which we perceive others and even why bilinguals are better at conflict resolution. Drawing on cutting-edge neuro-linguistic research from his own laboratory in Barcelona as well from centres across the world, and his own bilingual family, Costa offers an

absorbing examination of the intricacies and impact of an extraordinary skill. Highly engaging and hugely informative, *The Bilingual Brain* leaves us all with a sense of wonder at how language works. Translated by John W. Schwieter

Bilingualism Across the Lifespan Dec 25 2019 Bilingualism Across the Lifespan explores the opportunities and challenges that are inherent in conducting cognitive research in an increasingly global and multilingual society. Divided into three sections, the book highlights the multifaceted and complex nature of bilingualism. The first section focuses on what every cognitive psychologist ought to know about bilingualism: the impact of bilingualism on cognition across the lifespan, the idea that bilinguals are not a special case, and the importance of bilingualism in cognitive research beyond language. The second section focuses on challenges inherent in bilingual research: diversity of bilingual experience, the assessment of proficiency, and finding matched comparison groups and materials. Finally, the book considers opportunities that are created when bilingualism is incorporated into the cognitive research enterprise. It illustrates how researchers of bilingualism leverage theory, methodology, and findings from single-language research, incorporate uniquely bilingual processes or representations, and target populations of bilinguals that help to establish universal properties. Bringing together leading international contributors, the book provides the reader with a better understanding of the nature of bilingualism and bilingual research as it relates to human cognition. It will be an essential read for all researchers and upper-level students of bilingualism and cognitive psychology more generally.

**Bilingualism and Bilingual Education** Aug 25 2022

**Bilingual** Sep 21 2019 Whether in family life, social interactions, or business negotiations, half the people in the world speak more than one language every day. Yet many myths persist about bilingualism and bilinguals. Does being bilingual mean you are equally fluent in two languages, or that you belong to two cultures, or even that you have multiple personalities? Can you become bilingual only as a child? Why do bilinguals switch from one language to another in mid-sentence? Will raising bilingual children confuse and delay their learning of any language? In a lively and often entertaining book, an international authority on bilingualism, son of an English mother and a French father, explores the many facets of bilingualism. In this book, François Grosjean draws on research, interviews, autobiographies, and the engaging examples of bilingual authors. He describes the various strategies—some useful, some not—used by parents raising bilingual children, explains how children easily pick up and forget languages, and considers how bilingualism affects the experience and expression of emotions, thoughts, and dreams. This book shows that

speaking two or more languages is not a sign of intelligence, evasiveness, cultural alienation, or political disloyalty. For millions of people, it's simply a way of navigating the complexities of life.
